## DETAILED ACTION

### ***Claim Rejections - 35 USC § 102***

The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless –

(b) the invention was patented or described in a printed publication in this or a foreign country or in public use or on sale in this country, more than one year prior to the date of application for patent in the United States.

Claims 1, 13, 18 and 19 are rejected under 35 U.S.C. 102(b) as being anticipated by Kobayashi et al.

In regard to claims 13 and 19, the Kobayashi et al. reference discloses a “system” (Figure 1) for preparing one or more materials in a batch process for use in a following downstream process, the system comprising:

“means for calculating” (a collective liquid preparation program) a necessary amount of the material for the following process; and

“means for allocating” (3a-3h, i.e. measuring units) the calculated amount of the material to following predetermined number of batches if the calculated necessary amount is less than a predetermined amount. The predetermined amount would have to be less than the capacity of pot 5a and more than a minimum amount of zero, as claimed.

In regard to claim 19, it stands to reason that a next batch can't be prepared until it is calculated.

In regard to claims 1 and 18, the method would be inherent during normal use and operation of the device.

***Allowable Subject Matter***

Claims 2, 14-16, 20 and 21 are objected to as being dependent upon a rejected base claim, but would be allowable if rewritten in independent form including all of the limitations of the base claim and any intervening claims.

***Response to Arguments***

Applicant's arguments filed 4/26/07 have been fully considered but they are not persuasive. In response to Applicant's argument that Kobayashi doesn't disclose the calculated necessary amount being less than a predetermined amount, see the following. The prescribed quantities measured and added to the pot would inherently have to be of a lesser value than the volume of the pot itself. Otherwise, prescribed amounts added to the pot would possibly be a larger amount than the volume of the pot and would overflow. Therefore, there is an inherent predetermined value of the size or volume of the pot being used and the quantity of material added to the pot would inherently be less than the predetermined volume of the pot, as claimed.
